PROFESSIONAL SUMMARY

Senior Product Manager with 6+ years of experience delivering digital products across mobile, web, B2B SaaS, and AI-enabled platforms. Proven track record of defining product strategy, leading cross-functional teams, and launching products that drive user growth, operational efficiency, and business value. Combines strong commercial acumen with technical fluency to build customer-centric products at scale.

EDUCATION

Manchester Metropolitan University — MSc International Business	Jan 2023 – July 2024
Bowen University — BSc Mathematics, Second Class Upper (3.9/5.0 GPA, UK 2:1 equivalent)	Sep 2012 – June 2016

CERTIFICATIONS

AI Security & Governance Certification , Securiti	Jan 2026
CFA Investment Foundations , CFA Institute	Nov 2019

PROFESSIONAL EXPERIENCE

OperatorAI — AI Product Manager & Automation Engineer

Dec 2025 – Present | Portfolio: [View here](#)

Helping businesses and professionals identify, implement, and successfully adopt practical AI solutions that reduce costs, improve operational efficiency, and enhance customer experiences. Lead end-to-end AI engagements spanning strategy, solution design, implementation, integration, AI training, and organisational adoption across AI agents, Voice AI, workflow automation, and intelligent business systems.

Selected Client Engagements:

- **Healthcare Transport Company:** Delivered a Voice AI receptionist that automates inbound customer calls and an AI operations dashboard enabling staff to manage emails and launch AI-powered outbound voice marketing campaigns.
- **Crestline Plumbing & Heating:** Designed and deployed a multi-channel AI customer engagement platform across WhatsApp, email, and web chat, automating lead qualification, appointment scheduling, and customer follow-up, responding to customers in under 10 seconds on average and eliminating missed leads.
- **RCCG Manifest Church Manchester:** Built an AI-enabled CRM supporting 200+ members with automated communications, engagement tracking, and AI-assisted messaging workflows, delivered via SMS with verified delivery tracking and full audit logging.
- **Pootman Payments (AI Demonstration):** Developed a production-grade multi-agent AI support platform using LangGraph with RAG retrieval (BM25 + vector search with RRF fusion), intelligent routing, a critic agent for hallucination detection, and a full evaluation and tracing pipeline, achieving 85% auto-resolution, 100% routing accuracy, 81% grounding accuracy, and \$0.015 cost per query across 15 structured evaluation runs.

Training & Enablement:

Deliver practical AI training programmes for businesses, professionals, and students, helping teams confidently adopt Generative AI, workflow automation, no-code AI tools, and AI-assisted productivity.

Core Technologies: Claude • OpenAI • LangGraph • n8n • Voice AI • Next.js • TypeScript • Supabase • RAG • API Integrations

Product Manager (Contract) — Axvion Limited

July 2025 – September 2025

- Partnered directly with the founders to validate an early-stage marketplace connecting customers with trusted tradespeople, translating business objectives and customer pain points into a focused MVP strategy. Led product discovery, prioritised features based on customer value, technical feasibility, and delivery constraints, and aligned engineering around a roadmap that accelerated MVP delivery and go-to-market readiness.

Product Manager, Corporate Digital Payments — Heritage Bank Nigeria

April 2021 – May 2023

- Owned the product strategy, commercial roadmap, and performance of a portfolio of four corporate digital payment platforms (web, SaaS), supporting 120 bank branches and 3,000+ corporate clients processing £750K+ in weekly transaction volume.
- Led cross-functional delivery across engineering, QA, regulatory, and third-party vendors to develop and launch the bank's first in-house corporate banking platform, migrating 400+ customers from a third-party system and growing adoption to 800+ corporate users within four months.

- Spearheaded a merchant digitisation initiative, defining pricing and fee structures, onboarding 200+ business merchants onto a PSP-integrated platform with automated invoicing and real-time payment tracking, driving 10% growth in deposit inflow and non-interest revenue.
- Led development of an internal ticket resolution system deployed across 120 branches, reducing issue turnaround time by 50% and improving operational efficiency at scale.
- Owned platform API strategy for corporate banking integrations, defining contracts, data mappings, and edge-case handling across 3 third-party vendors, supporting scalable partner onboarding, integration testing, rollout planning, and post-release monitoring.
- Led continuous product discovery through qualitative and quantitative user research, translating validated customer insights into functional and technical specifications, and coordinating with QA, UAT, regulatory, and risk teams to ensure full AML and KYC compliance.

Product Manager, Mobile Banking — Heritage Bank Nigeria

May 2019 – March 2021

Led the end-to-end revamp of Heritage Bank's retail mobile app (HB Padie 2.0), growing the user base from 600K to 1M+ users and increasing monthly active users by 40%, repositioning it as the bank's primary digital acquisition and self-service channel within 12 months.

Situation: The existing mobile banking app suffered from poor performance, outdated UI, and limited functionality, resulting in high crash rates, slow load times, frequent customer complaints, and low adoption. The app lacked essential self-service features, had no digital onboarding capability, and offered no data-driven insight into user behaviour or drop-off points.

Task: Designed and executed a phased product strategy to transform the mobile app into a high-performing, feature-rich digital banking platform. Phase 1 focused on core stability and performance optimisation. Phase 2 delivered a full UI/UX redesign and self-service feature expansion. Phase 3 introduced digital account opening, experimentation frameworks, and platform partnerships.

Action and Impacts:

- Partnered with engineering to improve core platform performance, reducing load time by 40%, cutting crash rates by 65%, and increasing uptime to 99.9%.
- Collaborated with UI/UX designers to overhaul the app navigation and onboarding experience, introducing clearer information hierarchy, streamlined screen flows, and session persistence, reducing onboarding drop-off by 45%.
- Introduced a self-service suite (bill payments, card management, spending limits, accounts management) and an in-app chatbot enabling 24/7 support alongside direct email contact channels.
- Launched a SafeLock savings feature within the mobile app, enabling users to set fixed-term deposit goals and earn interest on locked funds, driving deposits growth and deepening customer engagement through a self-service digital savings experience.
- Delivered a full digital account opening flow with an 8-minute average completion time, leading to 15% of new retail accounts opened via mobile within 4 months, unlocking mobile-led acquisition and reducing branch visits.
- Established a continuous data-driven A/B testing and experimentation framework informed by end-to-end journey mapping in Mixpanel, identifying and resolving critical drop-off points across onboarding and payment flows, leading to a 60% increase in payment completion rates and 35% reduction in payment support tickets.
- Led the development and launch of a virtual account platform enabling digital wallet services via secure API integrations, onboarding 3 fintech partners and acquiring 10K+ users within 5 months.

SKILLS & TOOLS

AI & Agentic Systems: LangGraph | Multi-agent Orchestration | RAG Pipeline Design (BM25 + Vector, RRF Fusion, Reranking) | Prompt Architecture | Critic Agents | Evaluation Frameworks | Pinecone | Prompt Caching | Claude Haiku / Sonnet | Voice AI | n8n | Zapier

Product & Strategy: Product Strategy & Roadmapping | 0-1 Product Development | Product-Market Fit | Go-to-Market | A/B Testing & Experimentation | Feature Prioritisation | OKRs & KPI Frameworks | Product Analytics | Data-Driven Decision Making | Stakeholder Management | Cross-functional Leadership | Competitive Analysis | Roadmap Communication

Technical: API Design & Integration | Platform Architecture | Agile / Scrum | SQL | Python | JSON | Mobile & SaaS Platforms | Full-Stack Prototyping (Next.js, TypeScript, Supabase)

Tools: JIRA | Confluence | Notion | Figma | Mixpanel | Amplitude | Google Analytics | Hotjar | Power BI | Postman | Lovable | Claude Code | Vertex AI Studio
